添加环境变量

- 1. hadoop 安装目录
- 2. 使配置文件生效

hadoop-env.sh

jdk 路径

core-site.xml

hdfs-site.xml

mapred-site.xml

首先需要复制

```
cp mapred-site.xml.template mapred-site.xml
```

yarn-site.xml

slaves

```
hadoop01
hadoop02
hadoop03
```

将主节点的配置和软件分发到子节点

```
scp /etc/profile hadoop02:/etc/profile
scp /etc/profile hadoop03:/etc/profile
scp -r /export/ hadoop02:/
scp -r /export/ hadoop03:/
```

格式化文件系统

```
hdfs namenode -format
```

启动集群

```
start-dfs.sh
start-yarn.sh
```

使用UI查看

192.168.198.130:8088

192.168.198.130:50070
